

Winston Zhao

SOFTWARE ENGINEER

ston@builtby.win | builtby.win/ston

SUMMARY

Software engineer with about 10 years of experience building full-stack, 0→1 products and launch-critical systems. Delivered international expansion, privacy-compliance, and customer-facing work at DoorDash; now builds and ships independent products.

EXPERIENCE

Independent Product Builder | builtby.win Aug 2022 — Present

- Build and ship full-stack products, client sites, and developer tools independently, from product concept through production release.
- Created back2vibing, an agent-session dashboard that surfaces agent activity, notifications, and direct session access.
- Built products including areyogo.ing for event-attendance discovery and Import Magic for automated media offloading and duplicate detection.

Software Engineer | DoorDash Aug 2019 — Aug 2022

- Led engineering work for DoorDash launches in Japan and Germany, resolving localization, currency, and legacy-system edge cases for international expansion.
- Led a cross-functional group of 15 across legal and engineering to deliver GDPR privacy compliance and unblock the Germany launch.
- Led a last-minute full-stack effort to add the identity support Stripe KYC required for Japanese Dasher payouts before launch.
- Identified roughly 50,000 daily requests that could create impossible order-to-item states; coordinated backend validation across merchant and shopping teams.
- Rebuilt DoorDash's complex item-modal UI, built the landing page still in use, and delivered item re-ordering for shopping flows.

Software Engineer | SigFig Apr 2018 — Aug 2019

Software Engineer | FinancialForce Apr 2017 — Apr 2018

EDUCATION

University of California, Los Angeles
Chemical Engineering
