PRODUCT WORK

[back2vibing](#) / Desktop — Tauri, Rust/React/ObjC Dec 2025 — Present

- Built a Tauri desktop app in Rust with a React and TypeScript UI, using an Objective-C bridge for macOS window control.
- Coordinates parallel AI coding sessions, surfacing agents that need input, permission, or review and opening the relevant tmux session.
- Supports Claude Code, Codex, OpenCode, Antigravity CLI, Pi, Oh My Pi, and Amp Code across Conductor.app, iTerm2, Kitty, Ghostty, Warp, WezTerm, tmux, and Zellij.

[areyougo.ing](#) / Web app — Astro, React Dec 2025 — Present

- Built a React web app on Astro, hosted on Cloudflare with self-hosted services deployed through Coolify.
- Implemented IMAP ticket-email synchronization and DeepSeek V4 Flash XML parsing to automatically update event attendance.

[Import Magic](#) / Desktop app — Electron, React Aug 2022 — Present

- Launched Windows and macOS desktop apps for automated media offloading and duplicate detection.

DOORDASH

Software Engineer Aug 2019 — Aug 2022

- Led engineering for Japan and Germany launches, resolving localization, currency, and legacy-system edge cases.
- Led a 15-person legal and engineering group to deliver GDPR compliance and unblock the Germany launch.
- Delivered identity support Stripe KYC required for Japanese Dasher payouts before launch.
- Identified roughly 50k daily invalid order-to-item requests and coordinated backend validation across teams.
- Rebuilt the item-modal UI, built the DoorDash landing page still in use, and delivered item re-ordering.

SUMMARY

Software engineer with about 10 years of experience building full-stack, 0→1 products and launch-critical systems.

STACK

Rust · TypeScript · React · Tauri · Electron · Astro · Objective-C · Cloudflare · Coolify · IMAP · DeepSeek V4 Flash · tmux · Zellij

PRODUCTS
