EXPERIENCE

Independent Product Builder / builtby.win	Aug 2022 – Present
- Build and ship full-stack products, client sites, and developer tools independently, from product concept through production release. - Created back2vibing, an agent-session dashboard that surfaces agent activity, notifications, and direct session access. - Built products including areyougo.ing for event-attendance discovery and Import Magic for automated media offloading and duplicate detection.	
Software Engineer / DoorDash	Aug 2019 – Aug 2022
- Led engineering for Japan and Germany launches, resolving localization, currency, and legacy-system edge cases. - Led a 15-person legal and engineering group to deliver GDPR compliance and unblock the Germany launch. - Delivered the identity support Stripe KYC required for Japanese Dasher payouts before launch. - Identified roughly 50k daily invalid order-to-item requests and coordinated backend validation across teams. - Rebuilt the item-modal UI, built the DoorDash landing page still in use, and delivered item re-ordering.	
Software Engineer / SigFig	Apr 2018 – Aug 2019
Software Engineer / FinancialForce	Apr 2017 – Apr 2018

SUMMARY

Software engineer with about 10 years of experience building full-stack, 0→1 products and launch-critical systems.

SELECTED PRODUCTS

back2vibing	Agent-session dashboard
areyougo.ing	Event-attendance discovery
Zero Stack	Sites and apps for small businesses
Import Magic	Media offloading and duplicate detection
